SAFEHOUSE

Safehouse Habitats (Scotland) Ltd provides a variety of products and services that protect our customers' people, preserve their assets and improve production levels.

Our flagship product is the **Safehouse Habitat**, an engineered solution that allows hot work to take place in hazardous environments without the need for a costly production shut-down.

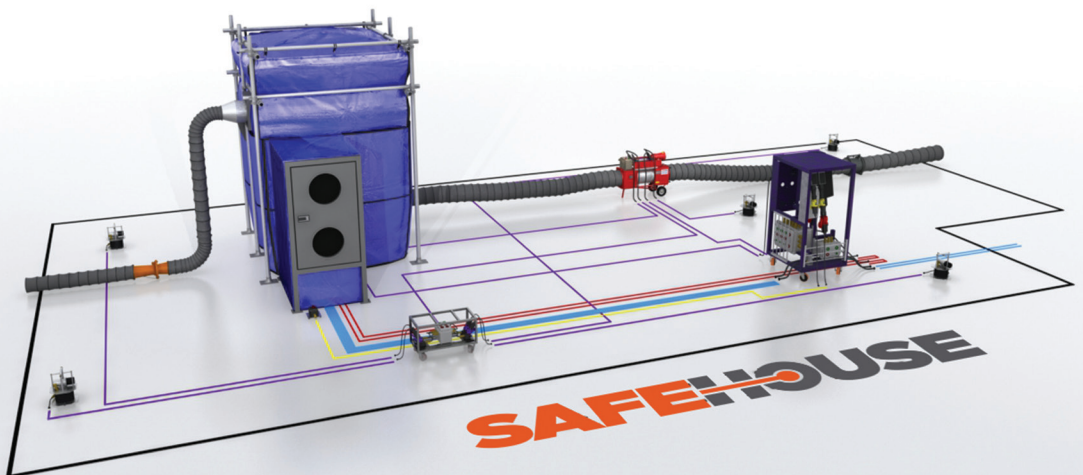

HOW IT WORKS

The Habitat is a pressurized welding enclosure that is designed to prevent hydrocarbons from entering the enclosed area, so that hot work can take place without the risk of ignition.

They provide an additional level of protection by including external gas detectors which instantly shut-down all systems associated with the risk of ignition upon detection of dangerous gases.

Our fully trained and certified technicians can install them quickly and easily – even in challenging environments – and can build them to any size.

The Habitats can remain on-site for the duration of a project, or can be dismantled with ease and minimum disruption.

The **ONLY**
fully ATEX certified
hot work habitat
in the world

10

Over 10 million
man hours **without** incident

Our habitats helped
customers save

**\$500
million**
