

SAFEHOUSE

.....

REDUCE RISK // SAVE COSTS // EXTEND ASSET LIFE // INCREASE PRODUCTION // IMPROVE WELFARE

Protecting your people, assets and production

SAFEHOUSE MISSION

*We protect people, preserve assets
and improve production through
engineered protection and services
to ensure work in hazardous
environments is universally safe.*

SAFEHOUSE

Protecting your people, assets and production

MEET SAFEHOUSE

Our technology-led engineered products and services enhance the capability, comfort and welfare of staff working in hazardous environments to increase the safety and productivity of your operations.

Whether onshore or offshore, oil and gas production or chemical processing, distilleries or food production, utilities, marine or water treatment, we engineer the right protective environments to ensure safe, productive working. These protective environments are enclosed by - and managed with - SAFEHOUSE habitats: our flagship patented products with integral monitoring and control systems.

Our temperature and pressure controlled SAFEHOUSE habitats have multiple applications.

We provide protection in zone 1 and 2 areas to prevent the need for shutdown. We extend working time by providing cool environments in extreme heat, warm working environments for cold conditions, and dry air environments where humidity can compromise repairs.

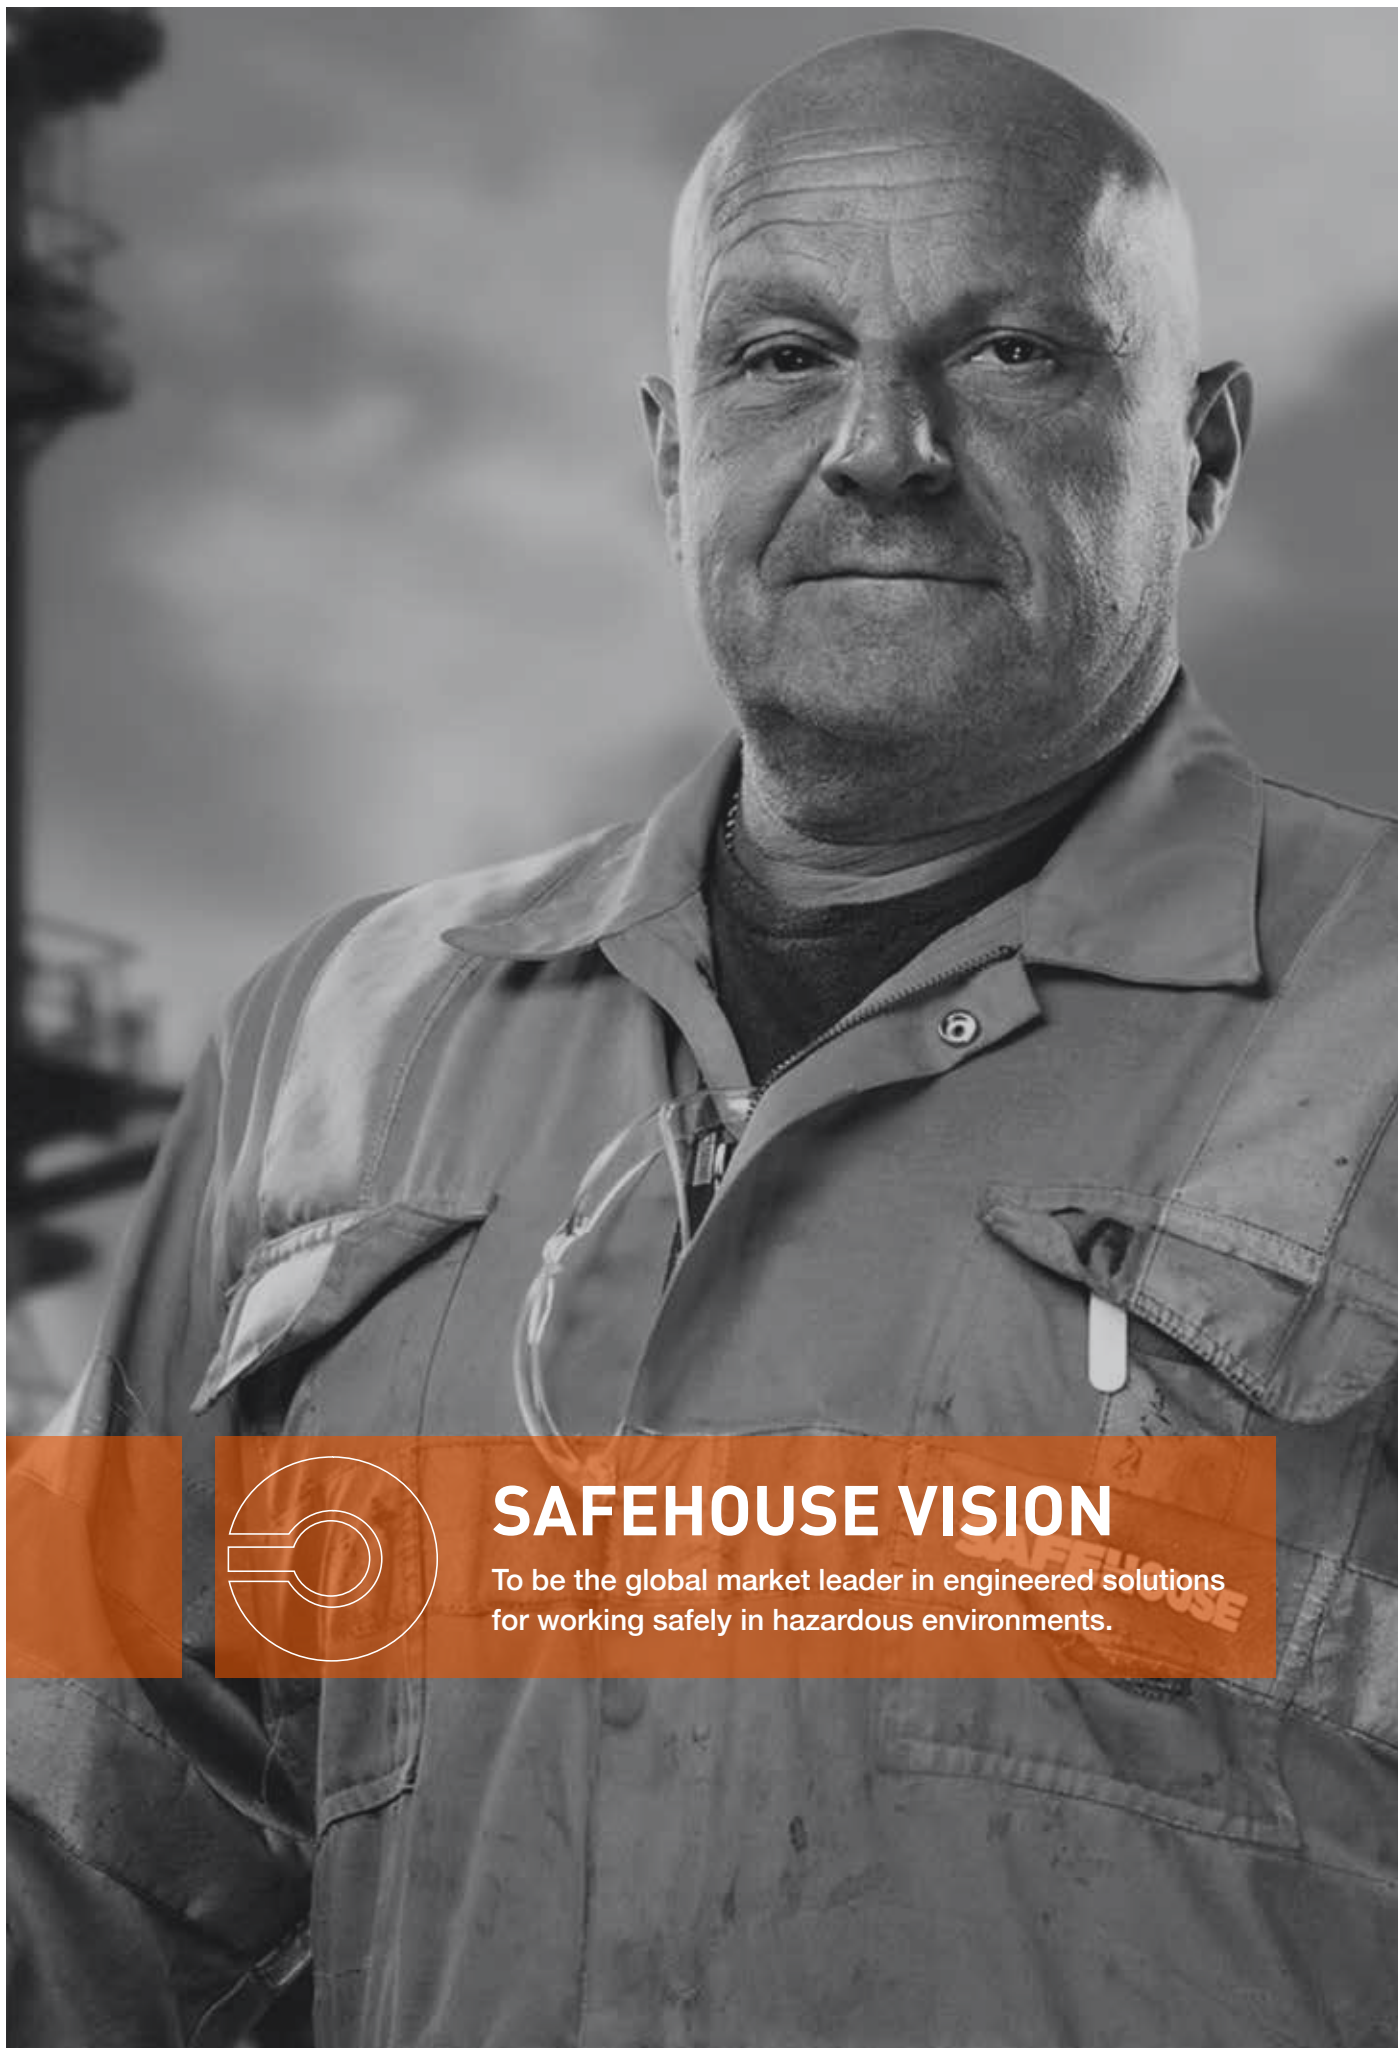

We ensure the world's toughest environments are safer, more productive and more economic.

We support the safe execution of your project by delivering everything you need from risk assessments and site surveys, to complete project management incorporating design, warehousing and logistics, installation, monitoring and evaluation. We can train and accredit your people in all aspects of the handling, construction and operation of SAFEHOUSE habitats.

We train hundreds of people every year to safely execute projects and deploy our engineered protection. Alternatively, we can supply our own highly-skilled accredited technicians.

We operate where you operate. SAFEHOUSE habitats enhance safety and productivity in over 35 countries through our partner network and regional hubs located in the UK, UAE, US, Australia and Malaysia.

Wherever you are in the world, access our locally held stock and in-country certified technicians. All our products and services are backed by our global technical support team.

SAFEHOUSE VISION

To be the global market leader in engineered solutions
for working safely in hazardous environments.

SAFEHOUSE

Protecting your people, assets and production

BENEFITS

SAFEHOUSE PRODUCTS AND SERVICES DELIVER FIVE CORE BENEFITS:

01 reduce risk

A robust process safety management system is central to every well managed installation. The highest safety standards don't have to interrupt production. When hot work is necessary, our independently certified habitat system provides the control you need to mitigate risk and operate safely.

Our experienced technicians enhance safety through careful hazard evaluation and risk reduction strategies. They optimise workflow by improving the efficiency of your maintenance schedule and implement safeguards to ensure compliant operations.

Our cost-effective and certified SAFEHOUSE habitats ensure operational risk is 'as low as reasonably practicable' (ALARP).

Reduce risk

We have enabled more than 10 million hours of safe production in the last 15 years.

Ask us how.

SAFEHOUSE

Protecting your people, assets and production

02 save costs

Challenging economic conditions demand increased production and increased profitability, without compromising safety. Safehouse ensures your team is safe, dry and comfortable in any temperature so they can work more efficiently, for longer.

Safehouse products and services reduce shutdown times by enabling safe simultaneous operations. Our pressurised SAFEHOUSE habitats isolate work areas so hot work can be carried out in hazardous environments on live plants. Multiple SAFEHOUSE habitats allow staff to perform tasks in parallel.

We have helped to unlock \$500 million in cost savings. SAFEHOUSE habitats significantly reduce shutdown days and cuts millions of dollars in asset management costs.

productivity
in the Middle East
in **2015**

03 extend asset life

Safehouse products and services facilitate simultaneous operations and avoid the need for unplanned shutdowns.

American Petroleum Institute standards recommend rigorous maintenance when it is needed, rather than deferring repairs and opting for the false economies of patching, cold cutting and bolting. Fully certified SAFEHOUSE habitats ensure comprehensive, safe repairs take place on live sites. This quality long-lasting maintenance ensures long term structural integrity – the key to protecting assets in corrosive environments.

Our products and services secure the integrity of your installation and prevent issues being caused through maintenance being delayed until shutdown.

**NO NEED
for
UNPLANNED
SHUTDOWNS**

Protecting your people, assets and production

04 increase production

Shutdowns cost millions of dollars and have the greatest impact on production. Safehouse products and services help control project scope. We optimise tool time by enabling strategic maintenance and maximising work before and after shutdown.

Our expert planning keeps your people safe and boosts productivity. We offer reliable engineered solutions for a winning strategy to maximise up-time and increase productivity.

**We've helped our customers optimise their productivity
generating an extra 60 million barrels of oil a year.**

creep

SAFEHOUSE

Protecting your people, assets and production

05 improve welfare

Combined with SAFEHOUSE habitats, or used independently, our SafeHeat and SafeCool products create a controlled environment and enable work throughout the year, irrespective of external conditions.

As operational challenges increase, we enable your people to be more productive.

This investment in safety and welfare ensures your team remains comfortable and motivated, focussed and productive.

WHAT CAN SAFEHOUSE DO FOR YOUR PEOPLE AND YOUR PRODUCTIVITY?
